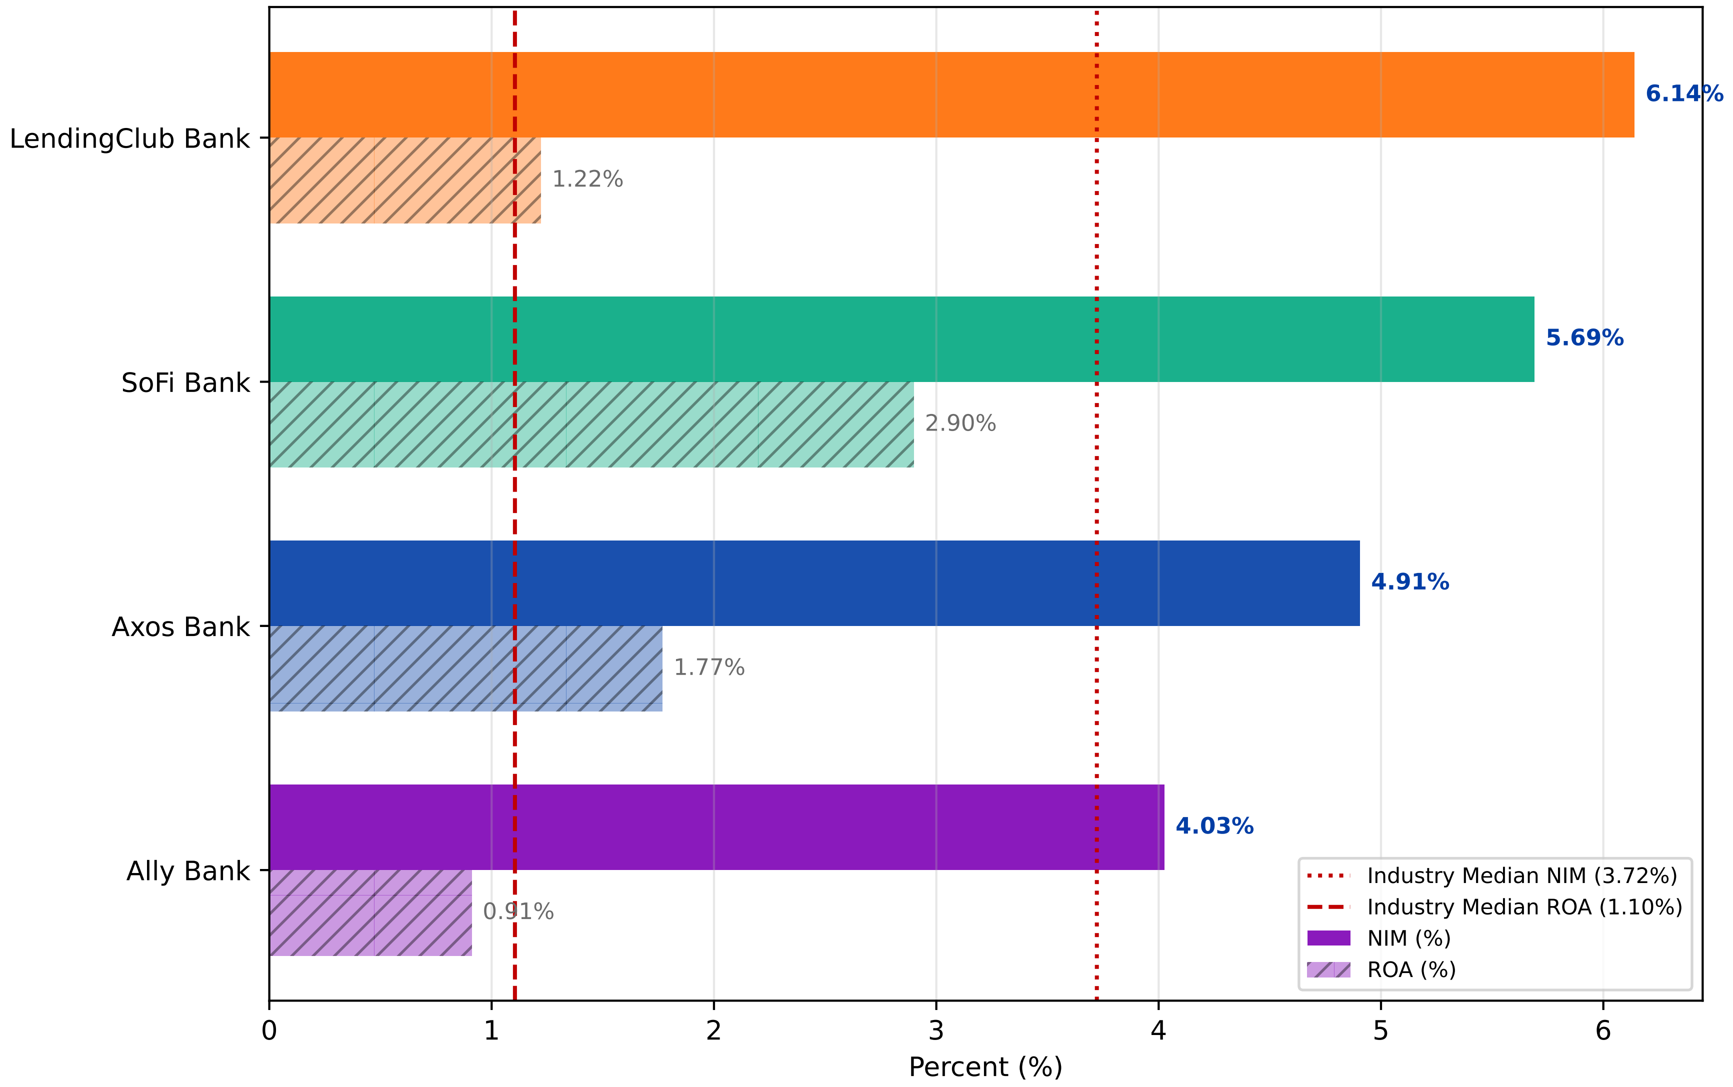
Diagnostic: Why did it happen?



Why Axos Outperforms

▶ **No branch network**

Zero physical overhead → interest income flows directly to bottom line

▶ **Disciplined deposit pricing**

Branchless model allows below-peer deposit rates without losing customers

▶ **NIM premium: +1.18 pp**

Axos NIM of 4.91% vs 3.72% industry median

▶ **ROA premium: +0.66 pp**

Axos ROA of 1.77% vs 1.10% industry median

Accelerate fee-based revenue (Axos Invest + Axos Clearing)

↓

Sustain ROA ≥ 1.7% as interest rates normalize

The Risk

Axos NIM has compressed from 5.3% (2020) to ~4.9% as rates peaked and plateau. Further normalization will squeeze net interest income.

The Opportunity

SoFi's super-app model shows fee income can offset NIM pressure. Axos Invest AUM and Axos Clearing revenue are underpenetrated vs. SoFi.

The Precedent

Ally Bank's ROA fell to 0.91% as it relied solely on NIM. Axos must diversify before rate headwinds materialize at scale.

How it was built

FDIC BankFind Suite API

114,781 bank-quarters
2020–2025
All FDIC-insured banks

GitHub Actions
